

PRESS RELEASE
CROSS MANUFACTURING COMPANY (1938) LTD.
&
TC FILTERS LIMITED

Following many years of impressive growth within the aerospace and automotive industry, Cross Manufacturing has found itself in the interesting position of selling off part of the business in order to concentrate on the core business of manufacturing highly specialised sealing rings and other parts for the aerospace and automotive industry.

Within Cross Manufacturing has been a small department, making water filtration equipment which has found its way into various applications such as the Channel Tunnel, the Royal Mint and several Scottish distilleries.

With the pressure on space at their Combe Down factory in Bath, Cross Manufacturing has decided to sell off the water filter department, and this has been taken on by a new independent company, TC Filters Ltd. The new company will continue to produce the high quality filters under the new name, with the filter coils continuing to be manufactured by Cross Manufacturing.

Mark Bradley, Company Director at Cross Manufacturing said, "This is a good move for both companies, as Cross can now focus on its core business of manufacturing parts, allowing TC Filters to continue to produce this hi tech range of water filters, as well as serving existing filtration customers".

Growth in difficult economic times is always impressive, and Cross Manufacturing has found itself extending both factories at Bath and Devizes to their physical limits, and has now purchased a third site in Devizes in which to expand.

"These are exciting times, and this is a great product, with a solid history, and we are very pleased to have the opportunity to continue selling these unique filters" said Paul Ferreira, Sales Director of TC Filters.
